PATENT

Goldstein et al. Application No.: 10/045,903

Page 2

Amendments To The Specification

Please replace the clause beginning at page 5, line 3 with the following amended clause:

--(x) cycloalkylalkyl, eyelaalkylalkynyl cycloalkylalkenyl and cycloalkylalkynyl, all optionally substituted with alkyl, halo, hydroxy or amino; --

Please replace the clause beginning at page 22, line 24 with the following amended clause:

-- (1) cycloalkylalkyl, eyeloalkylalkynyl cycloalkylalkenyl and cycloalkylalkynyl, all optionally substituted with alkyl, halo, hydroxy or amino; --

Please replace the paragraph beginning at page 27, line 12 with the following amended paragraph:

--Reaction of the 2-keto-3-phenylaminoacrylonitrile of formula 2 with a hydrazine of formula 3 provides a 5-amino-4-ketopyrazole of formula 4. This reaction is generally carried out in a polar solvent such as ethanol, isopropanol, and the like. Aryl/heteroaryl hydrazines of formula [[2]] 3 such as 2- or 3-chlorophenylhydrazine, 2-,3-, or 4-fluorophenylhydrazine, phenylhydrazine, 2-hydrazinopyridine, 2-hydrazinobenzothiazole, 2-hydrazinoquinoline etc., are commercially available. --

Please replace the paragraph beginning at page 30, line 6 with the following amended paragraph:

-A compound of Formula (1) where R^3 is heteroalkenyl, heteroalkynyl, heterocyclylalkenyl or heterocyclylalkynyl can be prepared by reacting a compound of formula $\underline{4}$ where Z is halo with a heteroalkene, heteroalkyne, heterocyclylalkene or heterocyclylalkyne respectively in the presence of

PATENT

a palladium (II) catalyst such as dichlorobis(triphenylphosphine)-palladium (II) in an organic base such as discopropylamine, and the like. Heteroalkenes, heteroalkynes such as allyl alcohol, propargyl alcohol, 3-butyn-1-ol, propargylamine are commercially available. Heterocyclylalkyne can be prepared by reacting an alkynyl halide with a heterocycle. For example, 2-morpholin-1ylprop-1-yne 3-morpholin-1-ylprop-1-yne can be prepared by reacting propargyl bromide with morpholine. Reduction of the double or triple bond under catalytic hydrogenation reaction conditions provides the corresponding compound of Formula (I) where R3 is a heterocyclylalkyl or heteroalkyl group. --

Please replace the paragraph beginning at page 64, line 14 with the following amended. paragraph:

--Replacing piperidine in Step[[1]] 2 above with:

morpholine,

N-methylpiperazine,

4-hydroxypiperidine,

2-aminopyridine,

3-aminopyridine,

4-methylimidazole,

3-aminopyrazole, and

2-methylimidazole;

the following compounds were obtained

Please replace the paragraph beginning at page 77, line 8 with the following amended paragraph:

--The ability of the compounds of this invention to inhibit the TNF-α release was determined using a minor modification of the methods described in Blifeld, C. et al. *Transplantation*, Vol. 51(2), 498-503, (1991). --
